SAP Enqueue performance X IO threads

April 2015 Clébio Dossa e Rodrigo Righi

Agenda

- Motivation, scope and methodology
- Technical clarification about the service
- Building the requirements
- Tests and results

Motivation

A high number of SAP customers opening incidents due to performance issues

No clear SAP documentation about the goal and the behaviour of enqueue IO threads

No benchmarks available from SAP about IO threads performance

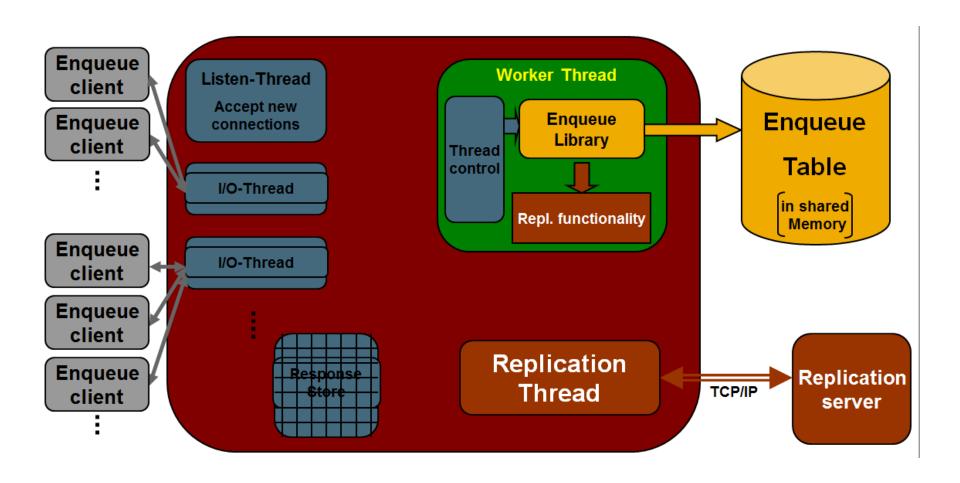

Scope

Enqueue IO Threads performance

Methodology

A loadrunner test comparing the performance using distinct number of threads

Enqueue Service

Building the requirements

Environment

Enqueue Server running on: - 2 CPU server - Intel(R) Xeon(R) CPU E5-2680 v2 @ 2.80GHz

- 4 CPU server - Intel(R) Xeon(R) CPU E5-2680 v2 @ 2.80GHz

Client started on: - 4 CPU server - Intel(R) Xeon(R) CPU E5-2680 0 @ 2.70GHz

Client

A clean and fast program able to trigger the most expensive task in Enqueue

Loadrunner

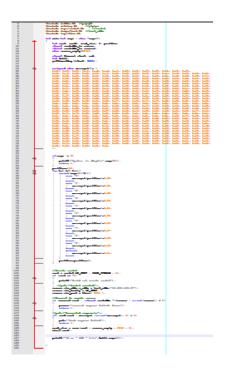

Phase 1: 5000 requests, 50 processes

Phase 2: 10000 requests, 100 processes

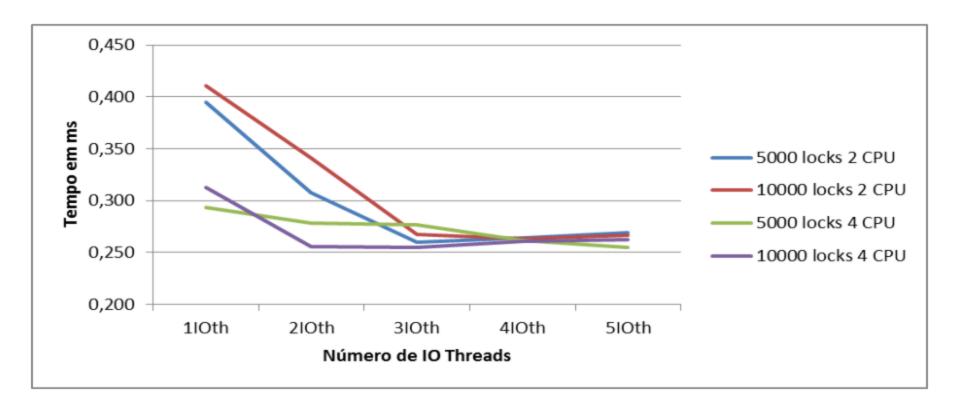

Building the client and loadrunner

```
tcpdump -nnXXSs 0 port 3201
cpdump: verbose output suppressed, use -v or -vv for full protocol decode
listening on eth0, link-type EN10MB (Ethernet), capture size 65535 bytes
